Report of the railway market in Poland in 2016

06.12.2017

This report presents a detailed analysis of rail market operations in 2016 comparing to the previous years. This is the sixth annual report published in English to bring the Polish railway market closer to English-speaking professionals.

The report describes the following topics and issues:

- structure and size of passenger and freight transport,
- railway infrastructure market, including the effectiveness indicators, the analysis of access charges and railway infrastructure quality and availability,
- the role of market regulator and the scope of regulatory decisions concerning the access to the railway infrastructure,
- passenger and freight transport, railway infrastructure and competition between transport modes in the European Union.

For the first time some detailed analysis have been published, i.e. railway undertakings' costs of electricity and fuel, main paths in freight transport, details about infrastructure managers. The structure of the report has also been refreshed.
